L05 Contribution Journal: Data Preparation & Feature Engineering

I spotted that the notebook was broken when I first opened it. Every cell collapsed onto one line, giving a syntax error, so I fixed the errors before starting. I completed all three coding tasks: median imputation for Age (28.0), one-hot encoding for Sex and Embarked with `drop_first`, and scaling Age and Fare with `StandardScaler`. I also checked each output against what was expected, which was 0 missing ages, the new encoded columns, and the scaled values. I observed the `FutureWarning` in the output of Task 1 after running the template's `inplace=True`, then confirmed it still worked. I then wrote and revised all three Knowledge Check answers and used Restart and run all so everything ran cleanly in order.

For the deliverables, I hosted L05 for Group 4. I chose one working notebook to export to PDF and named it to the group convention. Then, I collected my teammates' reflection and contribution journals through Canvas Inbox and appended them into the combined journals. Lastly, I created a public GitHub repo, uploaded all three deliverables, and submitted the URL in Canvas.

Diane Lenhoff Lab 04 Contribution Journal

For Lab 05, I worked through the entire notebook and completed the required code, activities, experiments, and analysis sections. I ran the code as I went and reviewed the results to make sure everything was working correctly.

I completed the different tasks in the lab and worked through the steps for handling missing data, One-Hot Encoding, and feature scaling. I also completed the knowledge check and reflection questions based on what I learned from the lab.

I worked with my team members to discuss the lab, compare our results, and help each other when we had questions or problems with the code. We were able to talk through the different steps and make sure we understood what we were doing.

My contribution focused on completing my portion of the notebook, understanding the data preprocessing steps, reviewing the results, and participating with the team. I did not coordinate or put together the final Lab 05 team submission.

Contribution Journal

For my contribution to this week's assignment, I worked through the Module 5 lab, altered a line of code in section part 2 to fix a Pandas error, and answered all of the knowledge check-in questions at the end of the workbook. I also took notes when needed. Finally, I wrote of my experience in my journals and turned them in before the due date.

Lab 05 Contribution Journal Elquin Ponce ITAI 1371

Elquin Ponce Completed the full Lab 05 notebook individually imputed missing Age values using the median, onehot encoded the Sex and Embarked columns with `pd.get_dummies()`, scaled the Age and Fare columns using `StandardScaler`, and answered all three Knowledge Check questions in the embedded markdown cell.
